

ABSTRACT

Security of an IC card containing customer's personal information is secured and the IC card is issued in real time even in bases of a card company in any security environments. A card issuing center has a center communication means for transmitting customer's card writing data to a base, and the base has a card communication mediate means for receiving the card writing data from the center communication means and transmitting the card writing data directly to an IC card medium connected to a terminal without storing the data writing data in the terminal of the base.
